

CIG-A-LIKE (PEN)

This 510-threaded standard vaporizer battery insert is the most common and considered the industry standard. Its shape is small and mimics a traditional tobacco cigarette. It produces minimal vapor, compared to other models. These units come in both rechargeable and disposable (or single-use) varieties.

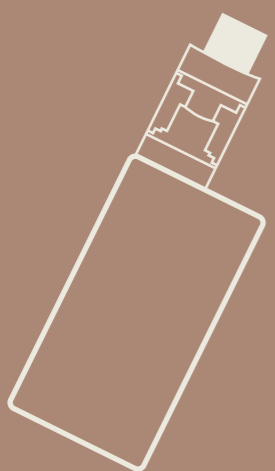

POD

This unit functions similarly to the standard pen but is usually sold as a proprietary system. The shape is different from a pen and is more transportable, using a USB key format. The mod has a limited battery power compared to the other units.

TUBE MOD

Its tube shape is similar to an electronic cigarette or pen but is much bigger because of the larger battery. These mods are rechargeable and offer more personalized settings, including vapor adjustment.

BOX MOD

This rechargeable model functions like the tube mod but comes in a rectangular or square shape. Offering a much greater power source, as it is the largest battery available.
